ABOUT US

DENMARK

Welcome to Integrated Gas Technologies

IGT is one of the Global leaders in the market for regulators and hoses for butane and propane cylinders.

IGT Headquartered in Denmark has two factories, NBSX located in Ningbo, China since 2004 and IGCT located in Hyderabad, India since 2016. IGT employs 245 people.

IGT uses the best raw materials such as zamac3, brass, steel and rubber for all components. In addition, we perform 100% quality control on both assembly and assembled finished products.

All LPG regulators come with a 5 year product warranty and \$ 5 million product liability insurance.

The factories have been audited and approved among others by international gas appliance companies and meet the high standards of these customer segments. Both factories are ISO9001 certified and in 2014 the NBSX factory was also BSCI certified (www.bsci-int.org), a social enterprise initiative aimed at ensuring compliance with the European Code of Conduct on Social Responsibility.

IGT aligns its production with the 17 United Nations Sustainable Development Goals to achieve a better and more sustainable future for all of us.

IGT WORLD WIDE SALES NETWORK OVER 110 COUNTRIES

IGT is a global supplier of domestic LPG Safety Device, with sales in over 110 countries.

IGT has a worldwide distribution sales network with its own sales staff in Europe, United States, Russia-SNG countries, China and India.

See complete distributor and dealer list on WWW.IGT-LPG.COM

IGT EU GAS

FITTINGS, VALVES & HOSES

- Applications: Gas appliances, Caravan, Boat and Leisure housing as well as professional installations
- In the EU there are over 50 different gas cylinder valve connections, gas pressures and outlet sizes-hoses etc.
- IGT is committed in to assisting by this catalogue to make a clear overview of the combined solutions available to the market.

- Hose extension pieces allow you to extend or add additional hose length to your installation.
- Note. For hose length exceeding 1.5M, local government regulations may be applicable. A Long hose contains a lot of Gas. Gas safety must be considered - volume - bending - gas leak risk - pressure drop - re-condensation - excess pressure build up etc to mention the most common issues.

- Hoses used for Low pressure in the EU is typical 6.3 - 8 - 10mm ID.
For gas appliances use EN16436-1 For gas torches use ISO 3821 Hoses.
- EN16436-2 defines a hose assembly. Typically a hose with a fitting on both ends.
Attached by a compressed sleeve or a hose clamp. Note EN16436-2 has
strict regulations on testing and marking of such products- as well as
certifications in many markets i.e. DVGW.

GAS FILTER

DOUBLE CUP DESIGN

The upper cup contain the gas filter. Replacement of the gas filter requires a wrench and is recommended done by a professional gas fitter.

The lower cup contains the gas pad that absorb the heavy ends and dirt. This can be unscrewed by hand by end user and gas pad can be exchanged regularly.

The inbuilt check valve closes the High Pressure upper gas filter unit of from the lower cup when the lower part is being unscrewed.

This safeguard the enduser against unwanted release of high pressure gas from the gas hose and upper filter unit.

The check valve allows exchange of the gas pads by end user without first emptying the complete gas system.

The gas filter extend the life time of the changeover regulator and ensure a trouble free use.

Item No	Inlet	RVS 8 mm

RVS 8 mm = 8 mm compression fitting to EN8434

RVS 10 mm = 10 mm compression fitting to En8434

Working pressure : 16 bar

Filter Unit : Absorb 99% of dirt and heavy ends

Gas pad in lower cup : Cotton pad that absorb the liquid residue and dirt.

- IGT gas filters 99,9 % of the aerosols from the gas and protects the LPG installation down stream. Filter unit can be exchanged – recommended every 2 years or whenever it is needed. Depending on the gas quality.

Technical data:

Gas type : LPG - Propane Butane Pressure : 0,3 -16 bar

Filter inlet/ Outlet :

8 mm Compression fitting - 10 mm compression fitting

M20 x 1,5 W21,8-G12

Compression fitting cutting ring 6mm EN 1254	Brass		A900-321

- Brass cutting ring + nut are used with copper tubing.
Steel cutting ring + nut are used with steel tubing.
Stainless Steel versions are available!
- Note: Always use brass sleeves inside copper tubing to avoid unwanted deformation of the copper pipe.

SLEEVES AND CLAMPS

L

Description	Material	Factory	IGT DK
		Item No.	Item No.
Sleeve 3/8 "	Brass		A900-186
Sleeve 10 mm	Brass		A900-187
Sleeve 8 mm	Brass		A900-166
Sleeve 6 mm	Brass		A900-330

- The brass sleeves are placed inside the 8 or 10 or 3/8 mm copper tubing before it is connected to a compression fitting. When the compression nut is tightened the sleeve ensures the soft copper tubing is not deformed and a gas tight connection is established.

- The compression fitting bridges the connection between the hose and pipe.
- Typically used for installation when you want to place the gas cylinder outside or in a ventilated compartment.
- In Europe such installations must comply with EN1949.
DVGW ARBEITSBLATT G607. Explains well the installation procedures.

- HP EXV are used directly after the gas cylinder valve.
Or connected to the outlet of an HP regulator

GAS LEAK TESTER

- The gas leak tester is used for mobile homes, leisure housing , caravan and boats where you have a combination of LPG hose and 2-15 meters of copper piping ending with a hose connecting to a gas appliance.
- The leak tester monitors the gas tightness- a push on the red knob reveals any gas leaks down stream of the detector.

- Manual change over valves are used to service one gas cylinder while the other cylinder is stand by.
- More cylinders on each side of the valve can be connected by the use of a manifold.

PVC HOSE - LOW PRESSURE ASSEMBLY (CLASS 2)

- To connect fittings, consuming appliances and piping
- Cold-resistant to -30°C
- Various hose standards can be offered. For EU EN16436-1 and EN16436-2 are predominantly used. Class 2, for reduced pressure and class 3 for unreduced pressure for class 3-IGT apply heavy sleeves with improved life time and durability with 300 NM pull force resistance.
- Use the A900-008, Install date label to monitor the end of use date.
- PVC hose is price competitive but has short durability of less than 5 years. Recommended exchanged after 3 years or when ever it is due.
- Each IGT Hose assembly is tested 100% gas tight by compressed air at 20bar. Rubber hose is recommended due to the longer durability, and fire resistance. It can last upto 10 years. Recommended exchanged after 5 years of use or when ever it is due.
- When Brass-Brass connections are used gas tight connections can be obtained at <3NM force. Connections of Zinc - Steel - Brass needs 12-18NM and are therefore not recommended.

All Hose assemblies can be supplied with steel/ stainless steel

PIGTAILS - HIGH PRESSURE ASSEMBLY (CLASS 3)

- Pigtails with built in excess flow valve, needle valve or ball valve.
- Any inlet and outlet combination, any length.
- Rubber hose made to EN16436 class 3, 30 bar- , optional steel braided.
- PVC hose made to UI144
- To connect fittings, consuming appliances and piping

Technical data:

- cold-resistant to -30°C
- Pull force to detach fitting >300 kg.
- 100 % factory gas leak tested at 20 bar.
- Leak tight -30°C- +50°C

TYPES OF THREADS: BSP THREADS

IGT uses standard EN ISO 228-1 to produce threads of the standard catalogue brass fittings for threaded tubes and pipes. This type of thread is also known as BSP parallel thread (cylindrical) or "Gas" thread (G).

The **cylindrical thread** to ISO 228-1 is a type of Whitworth thread, a name derived from the inventor of it and whose origins date back to England in the mid-nineteenth century. Whitworth shape is based on a thread with a thread angle of 55 degrees, with rounded crests and roots. This type of thread became the most widely used for connecting threaded pipe and emerged as the de facto British Standard, which became known as standard threaded British pipe or BSP (for its acronym: British Standard Pipe), in two variants: conical (BSPT, the "tapered"), and in its parallel or cylindrical shape (BSP, the last p of "parallel").

As mentioned, the **BSP threads** are threads with the profile "Gas" and can be of two types:

- **Parallel:** male and the female are mounted on the same cylindrical thread. Denomination according to ISO 228-1 is G.

Denomination example: 1/2" thread BSP parallel → **G 1/2**.

- **Tapered:** the conical male can be installed on a female thread conical or parallel. Denomination following ISO 7-1 (EN 10226-1) is R for external thread (male) and Rp and Rc for internal thread (female), with Rp if cylindrical and Rc when conical.

Denomination example: male thread 1/2" BSP tapered → **R 1/2**

IGT also manufacture conical threads on request, according to standard ISO 7-1 or others, such as the American standard NPT (National Pipe Thread), which also defines conical thread and we will talk some other time. Please contact us if it is your case and you need manufacture on request according to your specifications.

For more technical information you can ask us or refer directly to the rules:

- EN ISO 228-1: Pipe threads where pressure tight joints are not made on the threads. Part 1: Dimensions, tolerances and designation.
- EN 10226-1: Pipe threads where pressure tight joints are made on the threads. Part 1: Taper external threads and parallel internal threads. Dimensions, tolerances and designation.
